

Application of: Timothy A. Johnson
Serial No.: 10/629,855
Filed: July 30, 2003
Supplemental Response dated March 4, 2008

SUMMARY OF THE INTERVIEW

The courtesy of a personal interview extended to Applicant's representative, Michael Casey, on February 28, 2008 is hereby acknowledged with appreciation. During the interview, Applicant's representative discussed the pending claims in light of the applied reference (U.S. Patent No. 6,360,017 (hereinafter "the '017 patent")). Applicant's representative described how a system using the claimed method (and system) would operate as opposed to the system of the '017 patent. Moreover, Applicant's representative indicated that, in order to expedite prosecution, he would further accentuate certain limitations in the claims in order to highlight the existing differences between the '017 patent and the various thresholds in the claims. While no exhibits were shown and no demonstrations were conducted, an agreement was reached with respect to the claims that the clarifications made herein would likely overcome the outstanding rejection but that further consideration and/or search would be necessary before allowance of the application.
